RUTURAJ KUMBHAR (Jr. DevOps Engineer)

Hyderabad | +91 9960004403 | ruturajkumbhar261202@gmail.com | linkedin.com/ruturaj-kumbhar | github.com/Ruturaj_Kumbhar

PROFESSIONAL SUMMARY

Junior DevOps Engineer with 9+ months of hands-on experience, including a 6-month DevOps internship and current full-time role. Skilled in AWS cloud infrastructure (EC2, S3, RDS, IAM, VPC), Jenkins CI/CD pipelines, Docker, Kubernetes (EKS), Terraform (Infrastructure as Code), Argo CD (GitOps), and Linux automation using Shell/Bash scripting. Experienced in building and maintaining CI/CD pipelines, provisioning AWS infrastructure with Terraform, and implementing monitoring and observability with Prometheus and Grafana. Currently supporting production and testing environments for client and internal applications, including Nginx/Apache web servers, DNS, and SSL/TLS configuration. Seeking to grow expertise in cloud automation, Infrastructure as Code, container orchestration, and DevOps.

TECHNICAL SKILLS

Cloud Platforms	: AWS (EC2, S3, VPC, IAM, RDS, Route 53, CloudFront, Lambda, EKS)
Infrastructure as Code	:Terraform, OpenTofu
Version Control	: Git, Github, GitLab, SVN
CI/CD Tools	: Jenkins, Argo CD
Containerization & Orchestration	: Docker, Kubernetes, Openshift, Helm
Build & Dependency Tools	: Maven
Monitoring & Observability	: Prometheus, Grafana, CloudWatch, Dynatrace
Alerting Tools	: Alertmanager, Cloudwatch Alarms
Code Quality & Security tool	: SonarQube
Collaboration Tools	: Slack
Operating System	: Linux
Scripting language	: Shell Scripting
Configuration Management	: Ansible
Other Tools	: CloudFlare, ZeroSSL, Vercel

WORK EXPERIENCE

Tvisha Technologies Incorporation, Hyderabad
Junior DevOps Engineer | July 2026 – Present

- Manage AWS infrastructure for client and internal applications, supporting frontend and backend deployments across testing and production environments on Amazon EC2.
- Create, maintain, and troubleshoot Jenkins CI/CD pipelines, including pipeline configuration, build troubleshooting, deployment automation, and release management.
- Develop Shell/Bash scripts integrated with Jenkins to automate .env configuration, application deployments, backups, file transfers, and PM2 service management.
- Administer Linux servers using AWS CLI and SSH, performing deployments, service management, configuration changes, log analysis, and troubleshooting.
- Manage application processes using PM2 and systemd; configure Nginx and Apache for web hosting, reverse proxying, path-based routing, and HTTPS.
- Configure Amazon S3 for application file and image storage, manage IAM roles and permissions, and support Amazon RDS (MySQL/PostgreSQL) connectivity and application integration.
- Manage DNS records and domains across Cloudflare, GoDaddy, Namecheap, and Name.com; configure and troubleshoot SSL/TLS certificates, including ZeroSSL certificates.
- Deploy and manage frontend applications on Vercel, configure custom domains, and implement uptime monitoring to support application availability.

Olisoft Solutions LLP, Pune, India (Remote)
DevOps Intern | January 2026 – June 2026

- Worked on AWS infrastructure provisioning and management using Terraform, creating and modifying Infrastructure as Code configurations for AWS resources such as EC2, VPC, IAM, S3, and related services.
- Assisted in maintaining and troubleshooting Jenkins CI/CD pipelines for testing environments, including build failures, configuration issues, deployment errors, and pipeline execution problems.
- Configured and monitored applications and infrastructure using Prometheus and Grafana, creating dashboards to track CPU, memory, application, and system-level metrics.
- Worked with Docker to build, run, and troubleshoot containerized applications and understand container-based deployment workflows.
- Assisted with Kubernetes (EKS) tasks, including checking pods, deployments, services, logs, and troubleshooting basic application and deployment issues.
- Used Git and GitHub for source-code management, branching, version control, and collaboration with development teams.
- Created and maintained Shell/Bash scripts for basic deployment and infrastructure automation tasks.
- Assisted with documentation and troubleshooting of AWS infrastructure, CI/CD, monitoring, and deployment workflows.

PROFESSIONAL PROJECTS

Homefleet – Property Buying & Selling Platform | Tvisha Technologies

- Supported production infrastructure for a React.js, Node.js, and PostgreSQL application, deploying the backend on AWS EC2 with PM2, database on Amazon RDS, and media storage on Amazon S3.
- Designed and maintained Jenkins CI/CD pipelines for testing and production and developed Shell scripts for environment configuration, backups, deployments, and PM2 service management.
- Deployed the frontend on Vercel, configured Cloudflare DNS and ZeroSSL HTTPS, and supported AWS IAM, VPC, and Security Group configuration.

Technologies: AWS EC2, S3, RDS, IAM, VPC, Jenkins, Shell Scripting, PM2, Vercel, Cloudflare, ZeroSSL, Linux

Taskity – Task Management Application | Tvisha Technologies

- Deployed the Node.js backend on AWS EC2 with PM2, PostgreSQL on Amazon RDS, and application files on Amazon S3, with the frontend hosted on Vercel.
- Created and maintained Jenkins CI/CD pipelines for testing and production and automated deployment tasks using Shell/Bash scripting.
- Configured Cloudflare DNS and ZeroSSL SSL/TLS certificates to support HTTPS application access.

Technologies: AWS EC2, S3, RDS, IAM, VPC, Jenkins, Shell Scripting, PM2, Vercel, Cloudflare, ZeroSSL, Linux

Spotonn – Sports Management Platform | Client Project

- Deployed the React.js frontend on AWS EC2 with Apache and Node.js backend with PM2, with production data stored in Amazon RDS (MySQL) and media in Amazon S3.
- Built and maintained Jenkins pipelines and Shell scripts; validated the testing environment in the company AWS account and supported production deployment in the client AWS account.
- Configured Cloudflare DNS and ZeroSSL SSL/TLS certificates for HTTPS.

Technologies: AWS EC2, S3, RDS (MySQL), IAM, VPC, Jenkins, Shell Scripting, Apache, PM2, Cloudflare, ZeroSSL, Linux

LMS, EMS, WTB & TrueColor – Internal & Client Applications | Tvisha Technologies

- Supported application deployments, environment configuration, CI/CD operations, and troubleshooting across testing and production environments.
- Worked with Jenkins, AWS, Linux, Shell scripting, Apache/Nginx, PM2, DNS, and SSL/TLS for application and infrastructure support.

DEVOPS PROJECTS

End-to-End DevOps CI/CD Pipeline | Personal Project

- Built an end-to-end CI/CD pipeline using Jenkins to automate application build, testing, Docker image creation, and deployment to Kubernetes.
- Provisioned AWS infrastructure using Terraform (IaC) and implemented GitOps-based deployments with Argo CD for Kubernetes workloads.
- Configured Prometheus and Grafana for infrastructure and application monitoring, integrating Git, Linux, AWS, Docker, and Kubernetes into the DevOps workflow.

Technologies: Jenkins, Docker, Kubernetes, Argo CD, Terraform, Prometheus, Grafana, AWS, Git, Linux, CI/CD, IaC, GitOps

AI-Powered Actionable Agent Using Google Gemini & MCP | Personal Project

- Developed a Python-based AI agent using Google Gemini AI and an MCP Server to automate tasks and interact with external tools through REST APIs, with logging and error handling.
- Integrated AWS EC2 and Lambda to support cloud-based processing and automation workflows.
- Used Git and Linux for source-code management, development, and execution of automation workflows.

Technologies: Python, Google Gemini AI, MCP Server, AWS EC2, AWS Lambda, REST APIs, Git, Linux, Automation

---

EDUCATION

B.Tech (CSE) | Sant Gajanan Maharaj College of Engineering, Kolhapur | 2021 – 2025 — CGPA: 7.4 / 10

HSC | MRSV & Jr College, Phaltan | 2019 - 2021 — Percentage: 85%

SSC | Kamala Nimbakar Balbhavan, Phaltan | 2019 — Percentage: 75%
